

da Vinci Jr. 1.0 Pro

A Compact 3D Printer for Professional

Supports 3rd Party Filament

With adjustable temperature settings, the da Vinci Jr. 1.0 Pro can print with any 3rd party 1.75mm PLA, tough PLA and PETG filaments. The enclosed design also provides more consistent print quality.

Ready to Print

The da Vinci Jr. 1.0 Pro uses an intuitive 9-point calibration detection system that accurately determines the distance between the extruder and the print bed, allowing you to print perfectly from 20 to 400 micron resolutions. With the optional 0.3mm extruder add-on, the print surface can become spectacularly smooth.

Faster Slicing, More Control

"Choose from any 3rd Party PLA or PETG filament and easily adjust print settings to match your material in our

XYZware Pro or other slicing software.* *Cura and Slic3r "

What else do we offer

Hassle free software

All XYZprinting printers come with FREE CAD and slicing software. The user-friendly UI design will lead you all the way from modeling to printing.

Online gallery

We gathered passionate and creative designers, sharing 3000+ 3D models available for free download. Join the community and create together!
